Cora | Test cross-entropy under four deletion requests

Raw endpoints: lower is better. No subtraction of Random or Retrain.

Faint dots: ten training seeds. Large dots: means; bars: pointwise 95% t intervals (not seed SD).
Same-selector Retrain is repeated for comparison, not independent evidence. Main five panels share a y scale.
Requests are separate conditions. GIF represents GIF/IDEA: identical accuracy; CE difference <1e-8; AUC difference <0.001 pp.
